  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                     This invention relates to a novel method for the modification of an enzyme participating to the biosynthesis of a poly3-hydroxyalkanoic by modifying by recombinant DNA technology. The invention also compra gene encoding the above mutant poly3-hydroxybutanoate synthase and recombinant vector containing the above gene. The method of the inventay be used for the preparation of biodegradable polyesters. The presequence represents a protein used the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                   ಹ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        mutein
                                                                                                                                                                                                                                                                                                                                                                                   Modification of a biodegradable polyester synthase, a mutant poly3. hydroxybutanoate synthase, its preparation, a recombinant vector, transformant, preparation of a biodegradable ester polymer.

This invention relates to a novel method for the modification of an enzyme participating to the biosynthesis of a poly3-hydroxyalkanoic acid by modifying by recombinant DNA technology. The invention also comprises a gene encoding the above mutant poly3-hydroxybutanoate synthase and a recombinant vector containing the above gene. The method of the invention may be used for the preparation of biodegradable polyesters. The present sequence represents a protein used the method of the invention
                                                                                                                                                                                                                                                  Modification of a biodegradable polyester synthase, a mutant poly3. hydroxybutanoate synthase, its preparation, a recombinant vector, transformant, preparation of a biodegradable ester polymer.

The invention also comprises a gene encoding the above mutant poly3-hydroxybutanoate synthase and a recombinant vector containing the above gene. The method of the invention may be used for the preparation of biodegradable polyesters. The present sequence represents a protein used the method of the invention

This invention relates to a novel method for the modification of an enzyme participating to the biosynthesis of a poly3-hydroxyalkanoic acid by modifying by recombinant DNA technology. The invention also comprises a gene encoding the above mutant poly3-hydroxybutanoate synthase and a recombinant vector containing the above gene. The method of the invention may be used for the preparation of biodegradable polyesters. The present sequence represents a protein used the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Modification of a biodegradable polyester synthase, a mutant poly3-hydroxybutanoate synthase, its preparation, a recombinant vector, a transformant, preparation of a biodegradable ester polymer.
                                                                                                                                                                                                                                                   acid; biodegradable polyester
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ore 34; DB

This invention relates to a novel method for the modification of an enzyme participating to the biosynthesis of a poly3-hydroxyalkanoic acid by modifying by recombinant DNA technology. The invention also comprises a gene encoding the above mutant poly3-hydroxybutanoate synthase and a recombinant vector containing the above gene. The method of the invention may be used for the preparation of biodegradable polyesters. The present sequence represents a protein used the method of the invention
                                                                                                                                                                                                               Modification of a biodegradable polyester synthase, a mutant hydroxybutanoate synthase, its preparation, a recombinant ve transformant, preparation of a biodegradable ester polymer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

; Sequence 20, Application US/0995502
; Sequence 20, Application US/0995502
; Patent No. US20020072118A1
; GENERAL INFORMATION:
; APPLICANT: Downs, Diana M.
; APPLICANT: Downs, Diana M.
; TITLE OF INVENTION: Method for Preventing Superoxide Damage to Cells and
; TITLE OF INVENTION: Oxygen-Labile Proteins
; FILE REFERENCE: 960296.97559
; CURRENT APPLICATION NUMBER: 00/234,588
; PRIOR APPLICATION NUMBER: 60/234,588
; PRIOR APPLICATION NUMBER: 60/234,588
; RIOR APPLICATION NUMBER: 60/234,588
; RIOR APPLICATION NUMBER: 00-09-22
; SOFTWARE: PatentIn Ver. 2.1
; SEQ ID NO 20
; LENGTH: 90

Sequence 19, Application US/09955502;
Patent No. US20020072118A1;
GENERAL INFORMATION:
APPLICANT: Downs, Diana M.
APPLICANT: Gralnick, Jeff A.
TITLE OF INVENTION: Method for Preventing Superoxide Damage to
TITLE OF INVENTION: Oxygen-Labile Proteins
FILE REFERENCE: 960296.97559
CURRENT APPLICATION NUMBER: US/09/955,502
CURRENT FILING DATE: 2001-09-18
PRIOR APPLICATION NUMBER: 60/234,588
PRIOR FILING DATE: 2000-09-22
NUMBER OF SEQ ID NOS: 33
SOFTWARE: PatentIn Ver. 2.1
                                                                                                                                                                                                                                                                                                                                                                                                         0
                                                                                                     t

APPLICANT: Downs, Diana M.

TITLE OF INVENTION: Method for Preventing Superoxide Damage to Cell:

TITLE OF INVENTION: Oxygen-Labile Proteins

FILE REFERENCE: 960296.97559

CURRENT APPLICATION NUMBER: US/09/955,502

CURRENT FILING DATE: 2001-09-18

PRIOR FILING DATE: 2000-09-22

NUMBER OF SEQ ID NOS: 33

SOFTWARE: Patentin Ver. 2.1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1 MARTVFCEYLKQESEGLDFQLYPGELGKRIFDSISKQAWREWMKKQTMLVNEKKL

Sequence 27, Application US/09955502

Patent No. US20020072118A1

GENERAL INFORMATION:

APPLICANT: Downs, Diana M.

APPLICANT: Gralnick, Jeff A.

TITLE OF INVENTION: Method for Preventing Superoxide Damage to (
TITLE OF INVENTION: Oxygen-Labile Proteins

FILE REFERENCE: 960296.97559

CURRENT APPLICATION NUMBER: US/09/955,502

CURRENT FILING DATE: 2001-09-18

PRIOR APPLICATION NUMBER: 60/234,588

PRIOR FILING DATE: 2000-09-22

NUMBER OF SEQ ID NOS: 33

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 30, Application US/0995502

Sequence 30, Application US/0995502

Patent No. US20020072118A1

GENERAL INFORMATION:

APPLICANT: Downs, Diana M.

APPLICANT: Gralnick, Jeff A.

TITLE OF INVENTION: Method for Preventing Superoxide Damage to TITLE OF INVENTION: Oxygen-Labile Proteins

FILE REFERENCE: 960296.97559

CURRENT APPLICATION NUMBER: US/09/955,502

CURRENT FILING DATE: 2001-09-18

PRIOR FILING DATE: 2000-09-22

NUMBER OF SEQ ID NOS: 33

SOFTWARE: Patentin Ver. 2.1

SEQ ID NO 30

LENGTH: 87
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       tt

S77102
hypothetical protein slr1865 - Synechocystis sp. (strain PCC 6803)
C; Species: Synechocystis sp.
A; Variety: PCC 6803
C; Date: 25-Apr-1997 #sequence_revision 25-Apr-1997 #text_change 08-Oct-1999
C; Accession: S77102
R; Kaneko, T.; Sato, S.; Kotani, H.; Tanaka, A.; Asamizu, E.; Nakamura, Y.; Miyajima, N.; o, K.; Okumura, S.; Shimpo, S.; Takeuchi, C.; Wada, T.; Watanabe, A.; Yamada, M.; Yasuda DNA Res. 3, 109-136, 1996
A; Title: Sequence analysis of the genome of the unicellular cyanobacterium Synechocystis s.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö

AC0754
probable membrane protein STY2194 [imported] - Salmonella enterica subsp. enterica serovar Typhi
C; Species: Salmonella enterica subsp. enterica serovar Typhi
A;Note: this species has also been called Salmonella typhi
C;Date: 09-Nov-2001 #sequence_revision 09-Nov-2001 #text_change 18-Nov-2002
C;Accession: AC0754

T10392
late expression factor 7 protein - Orgyia pseudotsugata nuclear polyhedrosis virus, OpMNPV
C; Species: Orgyia pseudotsugata nuclear polyhedrosis virus, OpMNPV
C; Date: 16-Jul-1999 #sequence_revision 16-Jul-1999 #text_change 21-Jul-2000
C; Accession: T10392
R; Ahrens, C.A.; Russell, R.R.; Funk, C.J.; Evans, J.; Harwood, S.; Rohrmann, G.F.
Virology 229, 381-399, 1997
A; Title: The sequence of the Orgyia pseudotsugata multinucleocapsid nuclear polyh A; Reference number: Z17011; MUID:97271300; PMID:9126251
A; Reference number: Z17011; MUID:97271300; PMID:9126251
A; Status: preliminary; translated from GB/EMBL/DDBJ
A; Molecule type: DNA
A; Residues: 1-211 <AHR>
A; Residues: 1-211 <AHR>
C; Superfamily: Orgyia pseudotsugata nuclear polyhedrosis virus late expression fa

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Cabolio

Call division inhibitor sulA - Enterobacter aerogenes

C; Species: Enterobacter aerogenes

C; Date: 05-Jun-1988 #sequence_revision 05-Jun-1988 #text_change

C; Accession: C29016

R; Freudl, R.; Braun, G.; Honore, N.; Cole, S.T.

Gene 52, 31-40, 1987

A; Title: Evolution of the enterobacterial sulA gene: a component

A; Reference number: A29016; MUID:87248093; PMID:3297925

A; Residues: 1-169 <FRE>

A; Accession: C29016

A; Molecule type: DNA

A; Residues: 1-169 <FRE>

A; Cross-references: GB:M16467; NID:g148376; PIDN:AAA24810.1; PID

C; Genetics:

A; Gene: sulA

C; Function: inducible cell division inhibitor

A; Note: expression of sulA is repressed by lexA protein

C; Superfamily: cell division inhibitor sulA

C; Superfamily: cell division inhibitor sulA

C; Keywords: cell division control; SOS response

                                                                                                                                                                                                                                                                                                                                                                             C24H12
                                        Kibe, T.
submitted to the EMBL Data Library, December 1995
A;Description: The sequence of C. elegans cosmid F19C7.
A;Reference number: Z18461
A;Accession: T16103
A;Status: preliminary; translated from GB/EMBL/DDBJ
A;Molecule type: DNA
A;Molecule type: DNA
A;Residues: 1-310 < LET>
A;Coss-references: EMBL: U42439; NID: g1123106; PID: g1123109; PID
C;Genetics:
A;Gene: CESP: F19C7.3
A;Introns: 71/2; 178/3; 269/2
C;Superfamily: Caenorhabditis elegans hypothetical protein C24H1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              change
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Length 372;

C; Species: rice dwarf virus
C; Date: 09-Aug-1995 #sequence_revision 19-Oct-1995 #te
C; Accession: JC1069
R; Chu, R.Y.; Zhang, X.; Pan, N.S.; Chen, Z.L.
Acta Bot. Sin. 35, 115-120, 1993
A; Title: The cDNA cloning and nucleotide sequence of t
A; Reference number: JC1069
A; Accession: JC1069
A; Molecule type: mRNA
A; Residues: 1-372 < CHU>
C; Genetics:
A; Map position: segment 10
C; Superfamily: wound tumor virus nonstructural proteir
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 0
